
Since the beginning of time, people have been making their bass as big as, or bigger than, all other sounds. This has led to a style of music known as dubstep. Dubstep is an intense type of electronic dance music that has gained great popularity over the past few years and it is seen by many people as just another way for producers to make money. Many famous DJs and producers such as Skrillex and Diplo sell out stadiums around the world with just one song during their sets which can range from \$80-\$140 at shows. This is music that has been around for over 10 years. If you are new to dubstep, it is a type of electronic dance music that is characterized by its syncopated rhythm, deep basslines, and sub-bass sounds. It also heavily incorporates samples from older music. Dubstep originated in the UK but after receiving great reviews it quickly spread to the US and has blown up ever since. Many people are surprised to find out that some of the sounds used in dubstep were actually used through the whole history of electronic music but were so ahead of their time they weren't noticed and didn't catch on until recently when producers found ways to combine those sounds with other contemporary styles such as electro, house, and techno. Dubstep is extremely popular in Europe, particularly in the UK. It is also very popular in Japan. The basic elements of dubstep are the deep basslines, the syncopated rhythms, and the use of samples from older music genres. The same elements can be found in electro music, but there are many similarities between the two styles. The next time you go to a club or house party you will notice that most electronic dance music sounds very similar to what you hear at dubstep shows. This is because many DJs and producers will take one of their tracks and apply a dubstep style to it. Dubstep is also common in "mash-ups" which combine several songs into one. It is very popular with DJs and producers to take an uplifting house track and mix it with a dark drum and bass track, or any other combination they come up with (usually depending on the mood they want to convey). While listening to dubstep you can expect to hear some intense basslines, usually at around 120 BPM (beats per minute). A lot of dubstep contains samples from older music genres such as jazz and funk. This is why it is very popular among people who listen to electronic dance music such as house and techno. There are also a lot of lyrics used in dubstep, even if it is just a digitally processed voice. The lyrics usually revolve around profanity and drugs, but some people say that the lyrics make up for the lack of melody in dubstep by help convey the mood and emotion behind the song. Dubstep originated in the UK, but has grown drastically over the past few years and has quickly spread all around the world (except Asia). Most dubstep artists today get their start on MySpace or SoundCloud by posting demos or remixes to get themselves known.
